

The Waterways Railway Problem

Increased Tonnage the Only Solution...Asphalt, Salt, Limestone and Gypsum...The Province Needs Them...McMurray has Them

Half Million Dollars a Year Interest Charges

The Waterways railway is a provincial public works project which has been in existence since 1912. To date the cost in construction, maintenance, operating deficits and interest charges is approximately ten million dollars. At five per cent, interest that constitutes a burden on the treasury—which is the provincial taxpayer—of half a million dollars is equivalent to five per cent of the provincial revenue.

There is only one way by which the province can be relieved of the burden of the interest charges on the Waterways railway and that is by the railway developing sufficient traffic to earn that handling charges a year interest over and above operating expenses and fixed charges. Tonnage—sufficient tonnage and adequate rates—is the only possible solution of the problem in the interests of the Alberta taxpayer.

Annual Operating Deficit

At present the tonnage is not sufficient to pay the operating expenses, much less the interest on the capital invested. The operating deficit for 1922 is estimated to be \$60,000. In 1923 the operating deficit was \$82,000. Each year's operating deficit is an addition to the capital cost, and therefore to the interest burden to be carried by the province. The problem of tonnage is therefore not only important, it is urgent.

Agricultural Development Not Yet Sufficient

The Waterways railway is 290 miles long from Edmonton to the present terminus at Waterways on the Clearwater; eight miles from its junction with the Athabasca at McMurray. La Biche is 128 miles from Edmonton. The country through this part of the line is sparsely settled and agricultural development is slow. The Rock River in the Rocky Mountains. Of building stone or limestone for the production of lime there is practically none. Part of the stone for the Alberta parliament buildings and all the stone in some MacDonald hotel was brought from Indians. Some building stone has been brought from Tyn dall, Manitoba. The nearest great place to Edmonton is just this side of Jasper, nearly 250 miles to the west, on the Grand Trunk Pacific, and the next nearest is at Canmore, 60 miles west of Calgary, on the C.P.R. While the Rock limestone formation there, their material does not seem to be well adapted either for building or for lime burning. And here at McMurray the Athabasca cuts through a limestone formation, upon which the tar sand beds rest. The limestone is in layers and is full of fossils, ranging in every particular the stones at Tyndall. Manitoba, and the limestone formation at Ottawa for the new parliament buildings at Ottawa. An island in the Athabasca, opposite McMurray, is a solid mass of limestone with a very shallow overburden of earth. Ledges of limestone are exposed on both banks of the river for nearly two miles upstream from McMurray. The McMurray limestone shows up on the market in the western part of the prairies, as high class building stone and for lime burning as well. In this case, different from that of the tar sand, a question of slight railroad extension as well as of freight rates is involved.

Salt to Supply the World

The exact amount of salt found in the course of the Athabasca and Mackenzie has been known from the first exploration of the country. Some years before the Waterways railway was built two wells were drilled for oil at the mouth of the Athabasca. The water from the Athabasca, and also shown a short south of McMurray. Immense beds of salt were reported in both wells. One reported two salt beds 100 and 90 feet thick, respectively, separated by 75 feet of limestone. An ordinary chisel drill had been used in the inferior, which was considered reliable as to details. The water was considered reliable as to details. In October, 1912, the first section of the railway, and with a view of securing tonnage, the provincial government of that day commanded to drill a test well on the McMurray salt bed. A rotary drill was used so that a complete core could be preserved. The drill was started in a trench hole. Work was concluded at a depth of 600 feet, and the bottom was 100 feet below the surface. Although the reports as to the wells are not confirmed in detail the important fact was established that there were two layers of salt. From foot 604 to 662 the drill took out a core of 14 feet of transparent rock salt, which analyzed 72.7 per cent sodium chloride. Dr. G. H. of the University of Alberta, says: "These analyses show that the chief impurity present is calcium sulphate which is not present in sufficient quantity to be detrimental to the salt for market purposes."

Gypsum

Above the salt beds it is said that the drifts passed through several beds of anhydrite and gypsum. One of these, from foot 502 to 617 (56 feet) he describes as "White and bluish anhydrite with gypsum near the top." Speaking of the salt and gypsum Dr. Allan says: "There are at least three distinct beds of gypsum which would be mined and marketed without further treatment; at the same time possibly a considerable thickness of pure rock salt could be mined from other beds which would require additional treatment. If a shaft were sunk to the rock salt horizon, certain gypsum veins would be intersected, and it is not known what market demand should arise for calcium sulphate." In an analysis Dr. Allan gives the percentage of sulphur anhydrite from drift to 42 per cent, and of lime at 32 to 40 per cent. In the samples of gypsum and anhydrites taken from the drifts he found no sulphur. The mental pacifist will remain

in a small section of the world, and because it is prevalent, civilization advances as far as possible. It is not safe to go out and find new lands.

School teachers find it difficult to advance knowledge because about fifty thousand students are scattered along the road to knowledge, and the classes are afraid of mental warfare, like mathematics affrights the average mind.

They will pitch their camp in the most remote corners of the world, where they have the right to do as they please, rather than seek more fertile lands beyond.

Spurred by the well, Dr. Allan says: "The strata penetrated by the drill are remarkably free from water as no appreciable flow of water could at any time be detected in the well. This is an important factor if mining operations should be contemplated for the recovery of the salt."

The log of the well also shows a thirteen foot layer of white sand and boulders at a depth of 47 feet. The sand is of the kind used in making glass and is said to be 99.26 per cent. pure silica.

Competitive Supply Has Long Haul

The present state of the roads and weather conditions and under workable conditions brings absolutely settled the question of market is the only problem.

Commercial extraction of the bitumen is now being undertaken by the McMurray Asphaltum & Oil Co. The plant is located at Waterways. There is no country in the world where road surfaces made of asphalt are as good as those in the Prairie West. But bitumen is the most important of the responsibilities of the provincial governments. It is to be expected that McMurray asphalt will henceforth play an important part in provincial government road work and that the cities of the prairie will not overlook the home production of road surfacing materials.

Low Freight a First Necessity

There is, or ought to be, enough demand for road making material alone to give the Waterways railway ample traffic to carry both its operating expenses and fixed charges. But that condition can only be reached as the demand develops, and that will depend on the price at which the material can be put on the market.

As already stated the crude tar sand is the ideal road making material. But it is 70 to 80 per cent. sand and only 18 to 30 percent. bitumen. If crude tar sand is used the cost of extracting the bitumen and mixing it with the sand to make a road suitable for traffic is high. The cost per mile rate asphalt could be hauled from Waterways to Edmonton for \$1.23 per ton. Of course the Waterways has not the road conditions nor the motive power to haul as cheaply as the C.P.

R. and the National railways. But if they doubled the Fort William wheat rate that should be sufficient; charging a rate of not more than 50¢ per hundred weight would bring the rail to McMurray. If the road and motive power are not in condition to haul at double the standard wheat rates then they should be brought to that condition without delay, for it is only by getting action on the natural resources available at and near McMurray that the road can ever find tonnage that will clear the operating costs off. And the materials available can never be marketed except at low freight rates.

Limestones and Lime

The Prairie West is a clay country. The greatest wealth of Canada is in the blocks of shale and clay that form the great plains of the Red River in the Rocky Mountains. Of building stone or limestone for the production of lime there is practically none. Part of the stone for the Alberta parliament buildings and all the stone in some MacDonald hotel was brought from Indians. Some building stone has been brought from Tyn dall, Manitoba. The nearest great place to Edmonton is just this side of Jasper, nearly 250 miles to the west, on the Grand Trunk Pacific, and the next nearest is at Canmore, 60 miles west of Calgary, on the C.P.R. While the Rock limestone formation there, their material does not seem to be well adapted either for building or lime burning. And here at McMurray the Athabasca, opposite McMurray, is a solid mass of limestone with a very shallow overburden of earth. Ledges of limestone are exposed on both banks of the river for nearly two miles upstream from McMurray. The McMurray limestone shows up on the market in the western part of the prairies, as high class building stone and for lime burning as well. In this case, different from that of the tar sand, a question of slight railroad extension as well as of freight rates is involved.

FORTY-ONE YEARS AGO

From the Edmonton Bulletin of June 17, 1882.

Several logs have arrived from up the river for the H.B.C. Co. They are mostly in twelve foot lengths.

On Friday last as Mr. R. Secord,

the Indian agent of the Hudson's Bay Company (Pakan) was out hunting,

and after a hard day's work entered his left arm and side at 10:30 Saturday to attend to the case.

On Saturday morning he left the lake.

He brought some of his deer traps with him.

He was great starvation amongst the Indians at Lesser Slave Lake last winter, and many of them died of hunger and snow, which was four feet deep in March.

Mease McLean, Lloyd Hayes and MacCarrister arrived at Lesser Slave Lake on Saturday evening, and were soon on their way to settle in the Peace river country. They had gone to Mirror Landing and then up the Peace river to the head of the lake (where Ground is). There they were held up by Indians who had been there before, and were forced to stay over night.

On Sunday morning they were

met by Capt. Frank Oliver, Joseph Lake, and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

Capt. Oliver had recently returned from the Methodist Mission property in Foothills, and Capt. Gouraud from the Peace River. Capt. Frank Oliver, Joseph Lake, and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Monday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Tuesday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Wednesday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Thursday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Friday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Saturday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Sunday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Monday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Tuesday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Wednesday morning they were

met by Capt. Frank Oliver, Joseph Lake,

and Captain H. Fraser, William Henderson and Captain Fred Gouraud.

On Thursday morning they were

Hardwood Floors Need Care

Treat Your Hardwood Floor as You Would Your Car—
Do Not Use Strong Soap or Cleaning Compounds
and Carefully Avoid Scrubbing Brushes.

If your car has started out to wash his new car and used a coarse wool cloth, lots of strong soap and possibly a scrubbing brush, he will find that the floor is not caring for it than by the constant use of water may feed each day of the year.

Never scrub a varnished floor with water. Water is a water compound, don't try to get the mud off with a vigorous rubbing with soap. If you do, the water instead. If you with your fingers or a cloth, the surface clean clean as you would the car. Soak hardened dirt in a bucket of warm water, rubbing the gritty particles around until they are removed, then wash the floors with only clean water and add a dash of it as possible, using a stiff brush particles of sand and then wipe with another clean leather.

The method of floor treatment will preserve the surface indefinitely. It will prevent the myriad of stains that are caused by water. It will keep the varnish from being worn off by sharp particles of sand and will preserve the varnish indefinitely.

Remember, George, you will be proud of your car and you will be proud of them.

Paint Up

The following is the true story of two houses both of which needed repainting. While the actual case was in one of the New York suburbs yet it is typical of thousands of similar cases in other parts of the country.

It is a vivid example of the penny-was-pound foolish policy of putting off painting. The varnish had been applied more than the cost of the work has to be spent upon essential repairs, to say nothing of the value of the paint.

A decision.

"The year before the world war we decided to paint our house and we did not do it. We did not have the money."

"Our house is a few of houses built about the same time by the same man."

"We let our contract for \$150. Our house cost \$100. The man who when we paid extra to get the shingles on the roof painted. And he did not do it. He did not know what to do with the paint. He left it in a wooden trough he had constructed and stored it until they were painted inside and out, he decided to sell it."

"The house looked fine when we were painting it, but one day, too, I put up new drain pipes saying we would not have to paint again. The next year we had to paint again and he decided to wait till some drops, dried and then painted them."

"I think it did not rain. The next year we had to paint again and he decided to wait till some drops, dried and then painted them."

"About six months ago they decided they did not like the house any more and offered it for sale, but I did not buy it. I thought they would do something with it. They have had one sale since then, but we have not seen the dollars that were asking."

"We have been offered a thousand dollars for it, but we are not thinking, but we refined to sell, as our house looks nice and there is no real objection to selling it at good condition."

"If we kept it, books, our children might look something like this:

— Experience

1. Required of the neighborhood: 2. Painted exterior of house, sparsely on the ceiling; 4-Wooden drain pipes; 5-Old wood doors, panels. As a result: 1. Woodworms have eaten through the joints of the pipes; 2. Offered \$2,000 more than original price.

3. Painted exterior of painting.

4. Cost: \$1,450. GAIN plus what one would consider the other things.

Our Neighbor's Experience

1. Saved the \$800 that we spent for painting.

2. Neighbors call him avaricious, a great miser, a covetous, stingy shyster. Must repaint whole house.

3. Offered \$1,000 less than we were asking.

4. What would thing the other things were worth?

Canadian Fisheries

It is not generally appreciated even by Canadians that two of the four great rivers feeding areas of the world's greatest fisheries are under the Natural Resources Intelligence Service of Canada. The St. Lawrence and interior.

In addition, the lakes and rivers of the dominion constitute important fishing areas, particularly of the globe while the great inland lake, Lake Superior, may be regarded as a reserve. Their actual extent alone makes the Canadian fishing areas remarkable.

The fishery extends from Labrador to the boundary between the United States and Canada, measures 1,500 miles in length, covers 100,000 square miles and has 100,000 miles of inshore waters, all but 8,000 miles in length, is greater than the Mediterranean. Crossing the continent, the Great Lakes, over 7,000 miles long and has the unique feature of being the only system of islands of being exceptionally well sheltered for fishermen.

It is estimated that the total area of the Great Lakes is 200,000 square miles, and the Great Lakes and Great Lakes areas covering 24,000 square miles.

The Canadian fishing waters are exceptional in freedom, as well as in size, of the world's fisheries. The entire catch of salmon, lobsters, herring, mackerel and sardines, nearly all of which are taken by hand, hake and pollock are taken within 10 or 12 miles from shore.

GAS IN STOMACH
IS DANGEROUS

Thousands of Other Great Bargains That We Have No Space to Advertise. — Come, and Come Early!

Recommends Daily Use of Magnesia to Overcome Trouble Caused by Feeding on Acid Indigestion.

Gas and wind in the stomach accompanied by flat, bloated feeling after meals, are symptoms of the presence of excessive hydrochloric acid in the stomach, leading to acid indigestion.

Gas in the stomach is dangerous because too much acid irritates the delicate lining of the stomach, leading to gastritis, accompanied by severe pain, heartburn and vomiting. Gas and wind are also a cause of flatulence and souring of the stomach, causing acid indigestion.

This will drive the gas and wind out of the stomach, and when the stomach neutralizes the excess acid, there is no sourness or pain. Bismuth subsalicylate is a powerful antacid.

It is never liquid or milk is harmless to the stomach. Magnesia is a powerful laxative.

SATURDAY, JUNE 16, 1923

A CHANCE FOR PREPAREDNESS

Nowhere have the rains of the last two weeks made such a change in the crop outlook and the business prospect as in the southern parts of this province, where scant rainfall during several years had brought thousands of farmers to the verge of ruin and raised a question as to the possibility of carrying on profitable farming operations over a vast tract of country. That section of the province could have withstood another crop failure this year, without general disaster overtaking both farmers and townfolk, is doubtful. Naturally where the need was greatest, most that seem to have taken a turn for the better? If the latter is the case there will be failure to make use of the opportunity presented, and to apply the lessons which have been learned at so great a price. A few good rainfalls will do much to help, but it is important to protect it self against the known conditions to which it is periodically subject. It is to be hoped that this chance to offset the effects of future droughts before they arrive will not be missed. Certainly the provincial government, which is to carry on the work of reconstruction, would insist that these precautionary measures be carried out in the favorable years when they are not needed—and when money for the purpose is available. The time to fight drought in the dry belt is when there isn't any drought there.

THE WORLD CHAMPIONS

Congratulations are in order, and are forthcoming from every quarter, to the Commercial Graduates basketball team, the first athletic organization to bring a world's championship to Edmonton. It was a splendid victory, and their townfolk rejoice with the victors. May they long hold the honors they have won.

NEEDS NOT CORRESPOND

Canada needs people. Unfortunately it does not need the classes of people who most need to migrate to this or some other new country. It would be easy to fill the vacant lands of the north with people from over-crowded Europe, to whom no home would be a blessing. But that kind of people would not stay on the land if they were put there. They would flock to the cities in search of the life they have been led to; and our city population is not at all in need of recruits who have to be provided with jobs or supported at the expense of the taxpayers.

THE HEAVY SPENDING MONTHS

It is pointed out that the school boards of the city have to meet their bond payments during the early months of the year, and that the teachers are on a ten month basis instead of the usual twelve month schedule. That may account for the fact that during the first quarter the boards spent more than one quarter of the whole amount demanded by them for the year's operations. With the debenture installments out of the way, and two months during which there will be no teachers' cheques issued, the balance may be restored by the beginning of the fall term. That is to be hoped.

AN EASTERN TIE-UP

The miners in the Sydney, Nova Scotia, field decided to quit work. What is an altogether different matter, they declare, will be the withdrawal of the miners from the coal fields of the east. If a reasonable rate can be secured for shipping Alberta coal to Ontario, the tip-up of the Nova Scotia mines would do no harm to the miners and mine operators of this province. Nova Scotia is the one Canadian rival of Alberta for the control of supplies of coal. If Canadian mines are to be filled with Canadian coal the less that Ontario can draw from Nova Scotia the better the chance of selling the Alberta product in that province.

GETTING READY TO QUIT?

Berlin is talking about the "liquidation of France," to which Paris replies that France is not at war with Germany. Paris, of course, is right, but if the course of events in the occupied zone is not war it is a long way from peace, and a suspension of whatever it is would be in the interests of all concerned to have the German government take steps to end the war.

It is behind the "passive resistance" which the populace has maintained against the French authority. If the German ministers are minded to ease promoting trouble that will be agreeable to France, whatever term may be chosen to apply to the condition of prevailing, and who gave some hope of steps toward a safe and sane settlement of the reparations issue.

WHAT ABOUT THE DEFECTIVES?

Hon. Mr. Reid, minister of health, corrects a rumour that the provincial government would abandon its project of having the law allow adoption for defective children. Oliver, as an attorney for the Orphan Asylum, says that the proposed Red Dog institution or the establishment of homes in other parts of the province, by the government or by local authorities, the duty of taking care of mentally defective children is not less urgent than that of taking care of older persons. He also says that the cost of institutional treatment is increasing in numbers faster than the other class. To make provision for their care is a matter which can be either side-stepped or indefinitely postponed. The moron is a social menace, and cannot be left at large.

The tremendous interest in the FREE LA FLECHE CLOTHES CONTRACT is shown by the unique plan of ballooning on the ten "Inventions" is appealing to the public.

FIRST PRIZE—FORD SEDAN, specially equipped.

PRIZES—THE SECOND AND THIRD PRIZES OF \$500.00 and \$300.00 respectively.

Just now the excitement centres on the \$250.00. Suit Orders placed now get on this as well as on the other prizes.

Observe the dates of the drawings and the attendance at this year's exhibition.

HON. P. E. LEESARD FOR THE SENATE

Editor The Bulletin—Hon. P. E. Leesard, former minister in the Rutherford Cabinet and old-time Liberal of Alberta, has been a man of wide informed political circles, both in Canada and abroad, and is a member of certain wires received from the cabinet, then preceded over by Hon. A. C. Rutherford, Hon. Mr. Justice, and others upon various occasions and remained the representative of the legislature until the fall of the Liberal government in 1917. He can be seen since, in the forefront of Liberal thought and organization, especially in the west, and again, ago, in Cranbourne, Dorchester county, as well as from his physical appearance, new from the original of Scotch mother, Annie Campbell, and the Liberal spirit of French-Canadian man with the caustic tongue and the wit of the Scots. His innate qualities soon made him a prominent political force in Alberta and he was elected to the Young Liberals of Edmonton.

The Albertans Liberal Association, the Alberta Liberal Association, and the Alberta French-speaking compatriots whom he would officially represent in the whole, as well.

Is there a cavity in your teeth?

... Just look and see ... right now

IF THERE IS—and by cavity I don't mean a great hollow space, but any breaking of the enamel exposing the inner tooth structure—see me at once—for your own good.

THAT CAVITY may be only a speck today, but the tooth structure, once uncovered, decays very rapidly despite all the care you may take of it. The end—as far as tooth is concerned—is either the total destruction of the pulp part of the tooth or the exposure of the nerve and the possible creation of an abscess at the root—with all that this means to your general health.

WHY didn't I come before, is a remark I hear almost every day as I tell patients they have waited too long.

Come while the teeth can be saved. I will examine them and advise you as to their condition.

MAKE YOUR FUTURE SAFE

"When The Milk is Spoiled-- It's Spoiled"

"and it doesn't make any difference who left the ice box open."

You may be worth \$20,000 at age 30; \$40,000 at age 40; \$100,000 at age 50, etc., but it will be the amount of INCOME that you will have at age 65 that will be the most important thing in all your life.

Statistics Show that 95% of Men Have Lost Their All by Age Fifty

Our plan of SYSTEMATIC SAVING Provides \$1,000 insurance to age 65, with a yearly income of \$100 from then to death, ten of such payments being guaranteed, thus assuring against financial dependence in OLD AGE.

You Cannot Outlive the Income

For the payment of a small additional premium, the income would be continued to your beneficiary as long as she survives you. The following are the necessary annual deposits for different ages, with options available at maturity.

Age	Premises	Amounts paid at Death	Annuity at 65	Cost, value at 65	Paid up Insurance at 65	Cost and Paid up Insur. at 65
15	\$16.00	\$100	\$100	\$100	\$100	\$100
20	16.50	1000	1000	1000	1000	1000
25	17.00	1000	100	1000	1000	1000
30	20.74	1000	100	1000	1000	1000
35	27.70	1000	100	1000	1000	1000
40	26.45	1000	100	1000	1000	1000
45	47.25	1000	100	1000	1000	1000
50	67.23	1000	100	1000	1000	1000
55	108.53	1000	100	1000	1000	1000

UNCLE TOM'S LETTER

Dear Boys and Girls—I've been asked to tell you that the Garden Holes are now open for business. A friend of mine saw one the other day, and he said it was a good idea, and a bird in a tree does him no harm, so I have done the same thing, and I have seen the result, the "mimosa" and "lilac" are growing well, and the birds are coming to them.

Who can see him lately, with his beautiful flame-colored eyes? He is a very good boy, and he wears just the latest color?

This friend told me the other day that he had seen a bird in a tree, and the bird's song came from a tree near his house, and that he had seen a meadow lark's note. That was one more bird in one tree at the same time, and he thought it was a good idea, so I have done the same thing, and I have seen the result, the "mimosa" and "lilac" are growing well, and the birds are coming to them.

Rosie has sent us a good story about her new home, and she is very good this year yet, but everything is all right, and she is doing well, and it is doing well. Did any of you try the plan I told you about last year?

Have the caterpillars reached you yet? They are here, and they are in the trees bare. Not very pale, are they? Many of them have the plume of western willow, and they pass through the country some years ago, passing through the country some years ago, and they are here again. It is a member. It was while I was in the country, and I have seen many of them, and they were just nicely in leaf when all in their places, and when they were there, there wasn't a leaf to be seen. Many of them are here again, and they are very good this year, but everything is all right, and they are doing well, and it is doing well. Did any of you try the plan I told you about last year?

Uncle Tom's letter.

Chicago Grain

CHICAGO, June 15.—Higher prices for wheat resulted today from a sharp rise in flour and from a drop in some of the grain markets. Butter cattle were up to 40¢ per cwt. and feeders up to 25¢ per cwt. Cattle prices were up to 10¢ per cwt. Corn finished 5¢ to 1 cent up and oats were up to 1 cent up. The market was closed for a time due to a lack of buyers. (See page 26.)				
MINNEAPOLIS, June 15.—Flour unchanged at 13 cents lower; family meats 6 1/2 to 6 1/2¢ barrel. Hams, 10 1/2 to 11¢; bacon, 10 1/2 to 11¢; hams, 10 1/2 to 11¢; bacon, 10 1/2 to 11¢. Porkers, 8 1/2 to 9¢; hams, 10 1/2 to 11¢; bacon, 10 1/2 to 11¢. Hams, 10 1/2 to 11¢; bacon, 10 1/2 to 11¢. Hams, 10 1/2 to 11¢; bacon, 10 1/2 to 11¢.

"Fathers' Day"—June 17th

"BUY DAD A TIE"

From the Atlantic to the Pacific oceans, from the Gulf of Mexico to the Frozen North, one day of the year has been set aside as "Mother's Day." What about Father? He has carried his share of the load of responsibility and it is always his ambition that his children shall have a better chance than he ever had. Saturday, June 17th, has been selected as Father's Day, and will soon become a national event. Remember Dad Saturday with a gift to show our appreciation. We suggest these:

We Have a Complete Stock of Beautiful Ties

For 75c Men's fine art silk knitted ties in plain colors or in fancy patterns. They are mostly cross bar designs in a very comprehensive range of color combinations. Also there are medium wide end ties, of silk mixed fabrics, in floral, sport or striped designs.

For \$1.50 Men's fine silk mixtures and plain silk ties in beautiful color combinations that will suit the most fastidious. They come in medium wide-end styles and must be seen to be appreciated.

Buy Dad a Shirt

At \$2.00

Men's fine shirts with sport or outing style collar attached, plain white or striped patterns, also in negligee style with separate soft collar to match. Good value.

At \$3.00
